Drigo againts odd

Problem	Submissions	Discussions

drigo is a person who likes trees and only trees that produce fruit with a balanced composition that you like, but drigo has an oddity, drigo only plants a number tree in his house. The fruit of the tree planted by drigo is the numbers that will appear, when the number appears, the drigo has a habit of sorting them from smallest to largest, but there is one problem that you face. on the newly fruiting tree there is an odd number. Drigo really hates odd numbers, therefore every odd number he will sort will be a third of the original number and will round each number down. let's help drigo to sort it

Input Format
